

Everloc

Everloc is a real revolution in the realms of suction-fix products. Not only is it suitable for use on standard smooth shiny surfaces, as with other suction-fix products, but in addition it can be applied to rough, uneven surfaces, without the need to drill or glue the item in place.

The secret is in the seal. The Everloc products rely on a specially designed suction pad, which includes a mild spongy adhesive to fill the gaps in uneven surfaces, allowing the suction cup to create a strong, long-lasting vacuum seal. So easy and hassle-free to fit, just apply the product to the desired surface and tighten the locking bracket – it's as simple as that.

1. Unwind the locking bracket and apply to the surface

2. Push the suction pad against the surface and tighten the locking bracket

3. Hook on your product and its ready to use – it's as easy as that!

5. To remove the item simply un-screw the locking bracket and lift off the device by carefully breaking the seal around the edge of the suction pad.

6. Rinse the suction pad in cool water for a few seconds, to re-activate the adhesive and your Everloc product is ready to be re-applied.

7. Everloc has absolutely no need for drills, screws or glue!

We recommend that you remove and re-apply the product from time to time or if the product is knocked or slippage occurs.
